

Daily arXiv Research Briefing

Query: graph neural networks for misinformation detection

Date: 2026-05-11

1. Executive Summary

This briefing reviews 1 arXiv papers retrieved for 'graph neural networks for misinformation detection'. The top-ranked paper is 'Graph Neural Networks for Social Misinformation Detection'. The selected abstracts most often connect around: graph neural networks misinformation detection, detection, graph.

Evidence policy: summaries use only paper titles and abstracts; unsupported fields say "Not mentioned in abstract".

2. Search Overview

Query: graph neural networks for misinformation detection

Retrieved papers supplied to briefing: 1

Papers included in report: 1

Search status: Completed

3. Top Papers to Read

Rank	Title	Score	Categories
1	Graph Neural Networks for Social Misinformation Detection	0.95	cs.SI, cs.LG

4. Paper Cards

1. Graph Neural Networks for Social Misinformation Detection

Topic relevance: This paper studies graph neural networks for misinformation detection in social networks.

Problem: The title frames the target problem as Social Misinformation Detection.

Method: This paper studies graph neural networks for misinformation detection in social networks.

Contribution: Not mentioned in abstract

Evidence: Not mentioned in abstract

Limitation: Not mentioned in abstract

5. Research Trend Map

The most connected extracted topics are graph neural networks misinformation detection, detection, graph, misinformation, networks. This describes recurring vocabulary in the selected abstracts, not the broader arXiv corpus.

6. Keyword / Topic Network

Nodes: 9

Edges: 36

Density: 1.0

Average degree: 8.0

Central keywords: graph neural networks misinformation detection, detection, graph, misinformation, networks

Figure files: outputs/figures/keyword_graph.svg, outputs/figures/top_keywords.svg

Keyword communities: Community 1: detection, graph, graph neural networks, graph neural networks misinformation detection, misinformation, misinformation detection, networks, neural

7. Novelty & Relevance Analysis

All selected papers were ranked against the query 'graph neural networks for misinformation detection' using title and abstract text.

Graph Neural Networks for Social Misinformation Detection: This paper studies graph neural networks for misinformation detection in social networks.

8. Suggested Reading Order

1. Graph Neural Networks for Social Misinformation Detection - Matches the query topic directly.

9. Possible Research Ideas

Compare how different papers operationalize graph neural networks for misinformation detection across datasets, models, or evaluation settings.

Use the recurring topic cluster (graph neural networks misinformation detection, detection, graph, misinformation) as a starting point for a focused literature review.

Design a follow-up search that adds a domain qualifier to reduce broad keyword matches.

10. Limitations of This Search

The report only uses titles, abstracts, metadata, and ranking fields.

It does not read full PDFs, citations, appendices, code repositories, or external web pages.

Keyword communities are based on co-occurrence in the selected Top-K papers and are descriptive rather than causal.
